	High School Projections by Residence	33
Appendix A	District Wide Census Demographic Reports	
	U.S. Census Data within W.C.C.U.S.D. boundaries (Estimates by ESRI*)	36
Appendix B	Study Area Projections	
	Study Area Resident Projections	42

*The Third Party Demographic Reports are prepared using ESRI's Business Analyst Online (BAO). Reports are created by overlaying the West Contra Costa Unified School District boundary onto the ESRI BAO data. These reports are for informational purposes only; DDP is not responsible for the accuracy of the data.

INTRODUCTION

The West Contra Costa Unified School District has contracted with Davis Demographics & Planning, Inc. (DDP) to update and analyze demographic data relevant to the District's facility planning efforts. The scope of contracted work includes: mapping the District, address matching the current student file, developing and researching pertinent demographic data, identifying future residential development plans and developing a ten-year student population projection. DDP will then assist the District in developing solutions for housing future student population. Additionally, this

was prepared to assist the District's efforts in evaluating future site requirements and attendance area changes.

The purpose of this report is to identify and inform the District of the trends occurring in the community; how these trends may affect future student population; and to assist in illustrating facility adjustments that may be necessary to accommodate the potential student population shifts. The District can then use this information to better plan for the need, location and timing of facility or boundary adjustments.

The **Sources of Data** section details where the two sources of data, geographic and non-geographic, are collected and how each data item is used in the student population projection model.

The **Projection Methodology** section discusses in detail how the factors used in the study were calculated and why they were used. These factors include: the calculation of incoming kindergarten classes, additional students from new housing (referred to as student yield), the effects of student mobility, and a detailed review of planned residential development within the District.

The **District Student Resident Projection Summary** section reviews the Fall 2012/13 student resident projection results. Included in these sections are a district wide student population projection summary and a projected resident student population summary for each existing attendance area and study area.

While reading this report, it is important to remember that this is a snapshot of current and potential student population based upon data gathered in Fall 2012/13. Population demographics change, development plans change, funding opportunities can change, District priorities can change, and therefore, new projections and adjustments to the overall Master Plan will continue to be necessary in the future.

EXECUTIVE SUMMARY

Davis Demographics & Planning, Inc. (DDP) is assisting the West Contra Costa Unified School District (District) to plan for future student population changes. As part of this effort, the District requested a 10 year forecast through fall 2022/23. This report contains the results of this student population study. Factors such as current and historical student data trends, birth trends and estimates, as well as planned residential development have been taken into consideration.

It is important to remember that this projection is based upon residence of the current and future students as opposed to actual enrollment at each campus and is designed to alert the District as to when and where student population shifts will occur. For a detailed accounting of the enrollment at each school along with insight into the current inter-district and intra-district transfer patterns, please review the attendance matrix (**Section Three – Attendance Matrices**).

An increase in the number of births reported between 2006 and 2008 has caused larger kindergarten classes to be introduced to the District in recent years continuing a trend that has been present in recent years and has helped to form a bubble of larger student classes that stretches from kindergarten to 5th grade. The District has also implemented a transitional kindergarten program as directed by the State of California that will ultimately lead to the larger number of children being eligible for enrollment in a given year. As a result the District's TK-6 resident student population is expected to grow significantly over the next 10 years. By the end of the projection period in fall 2022 the District should expect 18,652 resident TK-6 students. 23 of the District's 32 elementary attendance areas are expected to see an overall increase while the remaining 9 are projected to decline. The Chavez elementary attendance area is projected to see the largest gain of any attendance area as it is expected to gain an additional 203 K-6 students over the next 10 years. In contrast the Lake attendance area is projected to see the steepest decline of any of the elementary attendance areas and is expected to lose 131 students by 2022. Whether or not an elementary attendance area grows or declines will largely be determined by how the students residing within the attendance area are distributed among the grades. With birth rates and transitional kindergarten playing such a pivotal role in the elementary student population projections it will be important for the District to continue to monitor these statistics as they become available in the future. This will be vital in determining if the implementation of transitional kindergarten will continue to offset the declining birth rates that have been observed in some parts of the District.

As the forming student population bubble moves through the District it will begin to impact the District's resident 7th and 8th grade student population. Larger incoming 7th grade classes are expected to begin entering the District's middle school student population in fall 2013. This will result in a growing 7th and 8th grade student population through 2022. At the end of the 10 year projection period in 2022 the resident 7-8 student population will have climbed by 636 students from fall 2012. The Helms Middle School attendance area is expected to see the largest increase over the next 10 years adding an additional 238 students to its resident student population by fall 2022.

. Once the student population bubble begins to entering the high schools a growing trend will begin to take hold and accelerate. Overall the District should see an increase of

917 in its resident high school student population by 2022. Only 2 of the District's 6 high school attendance areas will see declines during this period while the remaining 4 attendance areas will see gains. The El Cerrito High School attendance area is expected to see the most growth by adding an additional 581 students over the next 10 years. The Pinole Valley attendance area is expected to see the steepest of the declines losing a projected 145 students over the next 10 years.

The District as a whole can expect to see an increase in its overall resident TK-12 student population over the next 10 years. Growth is expected to occur in each year with the exception of 2022. By the end of the projection period in fall 2022 the district should see 32,151 resident students up 3002 students from fall 2012. The continued impact of a forming student population bubble in the elementary grades will cause growth to occur across all grade groupings over the next ten years.

METHODOLOGY

1 - SOURCES OF DATA

A - Geographic Map Data

Five geographic data layers were updated for use in the ten-year student population projections:

1. Street Centerline Database
2. Study Areas
3. Schools
4. Students – Historical and Current
5. Future Residential Development

1) Street Centerline Data

DDP has licensed a digital street centerline map of the School District from SANGIS. The street database has associated attributes that contain, but are not limited to, the following fields: full street name, address range and street classification

The main function of the streets is in the geo-coding process of the student data. Each student is address matched to the streets by their given address. The geo-coding process places a point on the map for every student in the exact location of student residence. This enables DDP to analyze the student data in a geographic manner.

Another vital utilization of the digital street database is in the construction of study areas. Freeways, major streets and neighborhood streets are used as boundaries for the study areas.

2) Study Areas

Study areas are small geographic areas and the building blocks of a school district; they are similar to neighborhoods. Study areas are geographically defined following logical boundaries of the neighborhood, such as freeways, streets, railroad tracks, rivers, etc. Each study area is then coded with the elementary, middle and high school that the area is assigned to attend. By gathering information at the study area level, a school district can closely monitor growth and demographic trends in particular regions and spot potential need for boundary changes or new facilities.

3) Schools

The District provided school facility location information to DDP for the purpose of mapping the District facilities.

4) Student Data

a. Historical Student Data - Historical enrollment is used to compare past student population growth and trends as well as the effects of mobility (move-in, move-out from existing housing) throughout the District. DDP utilized the three (3) previous years' (2009/10, 2010/11 and 2011/12) address matched students as historical data.

b. Current Student Data - A student data file representing the enrollment approximately for October, 2012 was geocoded this geocoded student file was summarized by grade level and by study area is used as a base for enrollment

projections. Existing students were categorized by study area through the address matching process that locates each student within a particular area based upon their given address. The projections run each of the next ten years from fall 2012/13 through fall 2022/23.

The Student Accounting Summary (Table 1) indicates the total student enrollment as of October, 2012 and the number of student used in the ten year student population projections. The projection model is based upon student residence and excludes students residing outside of the District’s boundaries, students unable to be address matched and special education students (special education students usually attend a school that services their particular need) and independent study students.

Student Accounting Summary
Fall 2012/13 Actual Enrollment (10/06/2012)

Total Students Provided by District File (Fall 12/13)	30,566
Students Living out of District	-148
Pre-K Students	-1,028
Students Unmatched	-41
Non Public Schools & Home School	-86
Continuation School	-114
STUDENTS USED IN PROJECTIONS	29,149

Table 1 – Student Accounting Summary

5) Future Residential Development

Planned residential development data is collected to determine the number of new residential units that will be built over the ten-year timeframe of the student population projections.

B - Non-Geographic Data

Two basic sets of non-geographic data were compiled and reviewed for use in the ten-year student population projections by residence:

1. Births by Zip Code
2. Mobility Factors

1) Births by Zip Code Data - Birth data by postal zip code was obtained from the California State Department of Health for the years 1991-2011 and roughly correlated to the West Contra Costa Unified School District. Past changes in historical birthrates are used to estimate incoming kindergarten student population from existing housing.

2) Mobility Factors - Mobility refers to the increase/decrease in the migration of students within the District boundaries (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage of increase/decrease among each grade for every year of the projections

2 – PROJECTION METHODOLOGY

The projection methodology used in this study combines historical student population figures, past and present demographic characteristics, and planned residential development to forecast future student population at the study area level. District-wide projections are summarized from the individual study area projections. **These projections are based on where the students reside and their school of residence. DDP utilizes the actual location where students reside, as opposed to their school of enrollment, in order to provide the most accurate estimate of where future school facilities should be located.** The best way to plan for future student population shifts is to know where the next group of students will reside. The following details the methodology used in preparing the student population projections by residence.

Projections Timeframe

Projections are usually calculated out seven (7) to ten (10) years from the date of projection for several reasons. The planning horizon for any type of facility is typically around five years. Seven to ten years are sufficient to adequately plan for student population shift and facility reorganization. It is a short to mid term solution for planning needs. Projections beyond Ten Years are based on speculation due to the lack of reliable information on birthrates, new home construction, economic conditions, etc.

At the Districts request DDP completed a Ten Year Student Population Projection.

Why Projections are Calculated by Residence

Typically, school district projections are based on enrollment by school. However, this method is inadequate when used to locate future school facility requirements, because the location of the students is not taken into consideration. A school's enrollment can fluctuate due to variables in the curriculum, program changes, school administration and open enrollment policies. These variables can skew the apparent need for new or additional facilities in an area.

The method used by DDP is unique because it modifies a standard cohort projection with demographic factors and actual student location. **DDP bases it's projections on the belief that school facility planning is more accurate when facilities are located where the greatest number of students reside.**

The following details the methodology used in preparing the student population projections.

1) Progression - Each year of the projections, 12th grade students graduate, and continuing students progress through to the next grade level and kindergarten students start schools. This normal progression of students is modified by the following factors:

2) Incoming Kindergarten & Transitional Kindergarten - Live birth data, reported to the California State Department of Health, by the resident postal zip code of the mother is used to project the base incoming kindergarten class. Additional kindergarten students may be added from future development. DDP uses birth data by zip code so, if need be, a different birth factor can be applied to various areas of the District.

Incoming kindergarten classes, for existing homes, are estimated by comparing changes in past births and birthrates. Table 2 shows the total births for each zip code in the West Contra Costa Unified School District from 1989 to 2011. Future kindergarten classes (2013/14-2022/23) are estimated by multiplying the existing kindergarten class (2012/13) by the ratio of the projected year's births to the 2007 births. Assuming that the Fall 2012/13 kindergarten class was born in 2007, DDP compared the total births in 2007 to the total births in 2008 to determine a factor for next year's kindergarten class (Fall 2013/14). Similarly, 2007 was compared to 2009 (Fall 2014/15 K class), 2007 to 2010 (Fall 2015/16 K class) and 2007 to 2011 (Fall 2016/17 K class).

The resulting projections are then modified further to account for transitional kindergarten. Birth data from the State of California is only made available by year and is not broken down by month. As a result DDP assumes that the total number of students born in a given year are distributed evenly amongst the months in order to create a working model.

DDP used birth data from the zip codes 94530, 94547, 94564, 94801, 94803, 94804, 94805 and 94806. There were 3,419 births in the baseline year of 2007. The data shows area births are lower in following years through 2011. This should lead to an increase in the kindergarten class size over the next 2 years. This would normally lead to a declining student K class in future years but the implementation of transitional kindergarten will work mask this effect as students are added to the K class from transitional kindergarten while the program is phased in. The end result will be a kindergarten population that peaks at 2,783 students in 2015.

Table 2- Birth Data

3) Student Mobility Factors - Student mobility factors further refine the ten-year student population projections. Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage to each grade for every year of the projections.

A net increase or decrease of zero students over time is represented by a factor of 100% (1.0). A net student loss is represented by a factor less than 100% (1.00) and a net gain by a factor greater than 100% (1.00) (see example).

Example:

$$\begin{array}{r} 100 \quad \text{8th grade students in fall 2012/13} \\ \times \quad .922 \quad \text{(9th Grade mobility Crespi M.S. east area)} \\ \hline = \quad \mathbf{92.2} \quad \mathbf{10th Grade students in Fall 2013/14} \end{array}$$

Having historical student data categorized by study area is extremely helpful in calculating accurate Student Mobility Factors. DDP was able to utilize the last four years' (Fall 2009/10, 2010/11, 2011/12 and 2012/13) student data. The data was organized into four yearly groups and then changes in the individual grades were examined. For example, a comparison was made for the Fall 2009/10 K student population to the Fall 2010/11 1st grade students. This comparison was also conducted for the Fall 2010/11 to Fall 2011/12 and the Fall 2011/12 to Fall 2012/13 students.

Using historic student data by study area allows DDP to calculate and apply unique mobility factors to various portions of the district. The W.C.C.U.S.D. has various neighborhood compositions and density. DDP originally created mobility factors by middle school attendance area. Upon examination it was determined that the projections would be more accurate if those areas were broken down even further. Interstate 80 was used to split some of the middle school attendance area into east and west portions. Mobility was then applied by these areas.

Table 3- Mobility Factors

4) Planned Residential Development –Planned residential development data is collected to determine the number of new residential units that will be built over the ten-year timeframe of the student population projections. The units projected to be built within the next ten years will have the appropriate Student Yield Factor, Table 4, applied to them to determine the number of new students planned residential development will yield.

This data was obtained through discussions with district staff, the major developers within the district boundaries, the local cities planning departments, the planning department of Contra Costa County and various other agencies. A database map of the planned residential development was created, including, when available, project name, location, housing type, total number of units and estimated move-in dates (phasing schedule). Projected phasing is based upon occupancy of the unit and is used to help time the arrival of students from these new developments.

In the student population projection by residence DDP includes all approved and tentative tract maps in addition to any planned or proposed development that possibly will occur within the projection timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the information may change and should be updated annually.

5) Student Yield Factors – Ten-Year Projections - Closely related to the planned residential development units are Student Yield Factors. The Student Yield Factors, when applied to planned residential development units, determine how many additional students will be generated from new construction within the District.

Student Yield Factors - District Wide*			
Type	K-6 Students	7-8 Students	9-12 Students

SFA	0.047	0.015	0.014
MFA	0.333	0.154	0.185

SFD= Single Family Detached Units
 SFA= Single Family Attached Units
 MFA= Multifamily Attached Units

Table 4– Student Yield Factors

*Note: Student Yield Factors were calculated by Jack Schreder and Associates and given to DDP by the W.C.C.U.S.D staff

3 - APPLYING THE VARIABLES TO GENERATE THE PROJECTIONS

The following paragraphs summarize how DDP uses the factors to determine the student population projections. Remember that these projections are based on residence.

The West Contra Costa Unified School District has been broken up into 401 study areas and each study area is coded for the elementary, middle school and high school attendance area in which it fall. The residential projections are calculated at the study area level. This means that DDP conducts 401 individual projections that are based upon the number of students residing in each study area.

The first step in running these projections involves listing the number of students that live in a particular study area by each individual grade (kindergarten through 12th grade). The current student base (Fall 2010/11) is then passed to the next year's grade (2010/11's K become 2011/12's 1st graders, 2012/13's 1st graders become 2013/14's 2nd graders, and so on). After the natural progression of students through the grades is applied, then Birth Factors are multiplied by the current kindergarten class to generate a base for the following year's kindergarten class.

Next, a Mobility Factor is applied to all grades. Again, these factors take into account the natural in/out migration of students throughout the District.

The last essential layer applied to the projections deals with additional students from planned residential development. This is a simple calculation, again conducted at the study area level, where the estimated number of new housing units for a particular year is multiplied by the appropriate Student Yield Factors. For example, if 100 single family detached (SFD) units are to be built in a specific study area in a given year, then you would multiply this number (100) by the SFD K-6 student yield factor (.210) and the resulting number of students (21.0) is divided evenly among the seven grades.

To finish generating the projections by residence, the same process is conducted for each of the 401 study areas. Once the projections have been run at the study area level, then it is simple addition to determine projections for each of the District's attendance areas or for a district-wide summary. For example, the student population projections for Hercules High School are simply the summary of all of the study areas that make up this specific attendance area (see **Sections Four** for the projections of each school attendance area). The District Summary for the projections (**Section Two**) is a total summary of all 401 study areas, which excludes all of the students that attend a District school but live completely outside of the District's boundaries, special education students and independent study students. These out of district, special education students and independent study students are factored back into the projections by simply adding the existing totals in at the bottom of the projections. (Please see the Attendance Matrices in **Section Three** for a breakdown of the out-of-district, special education students and independent study students by school.) DDP adds the current total out-of-district and unmatched students, special education students and independent study students to each year of the projections because there is no way to accurately forecast the residence of these students in the future.

DISTRICT WIDE PROJECTION

TEN-YEAR PROJECTION SUMMARIES

Finally, the student population is projected out ten years for each of the study areas and for the entire West Contra Costa Unified School District. The District Wide projection summaries enable the District to see a broad overview of future student population and what impact this population will have on existing facilities. The study area listings enable the District to monitor student population growth or decline in smaller geographic areas within the District.

At any point in time, study areas and their projected resident students can be shifted between schools to assist in balancing enrollment changes. Together, these projection summaries present the means to identify the timing of student arrivals and overall facility requirements, as well as location in order to accommodate the District's expected population shift.

ATTENDANCE MATRIX

Three attendance matrices have been included to provide a better understanding of where students reside and where they attend school. **Remember, DDP projections are based upon where the students reside, not where they attend school. DDP uses the actual location where the students reside, as opposed to their school of enrollment, in order to provide the most accurate prediction of future facilities adjustments.** Therefore, since the projections are based upon where the students reside, the figures used as a base for each school's resident projection may differ from the actual reported enrollment for each school.

These attendance matrices act as a check and balance for student accounting. They show where the students reside (in what School of Residence) based upon our address matching capabilities and what school they attend (School of Attendance) based upon data in the student file supplied by the District. The inclusion of these matrices is essential to showing how the students used in the projections match up to the District's records of enrollment for each school. The best way to plan for future facilities changes is to know where the next group of students will be residing, not necessarily which school they are currently attending.

READING THE MATRIX

Looking at the K-6 Attendance Matrix on the following page, let's begin with Bayview as an example. Following down the first column with the Bayview heading, there are 521 students that attend Bayview and reside in the Bay view attendance area. Continuing downward, 0 students attend Bayview but reside in the Castro attendance area. Next the matrix shows that 0 student attend Bayview but resides in Chavez's attendance area, and so on.

The row "TK students" refers to the number of TK students (24) attending Bayview. The row "Out of District" refers to students who live completely outside of the West Contra Costa Unified School District, but attend one of the District's schools. There are no Out of District students attending Bayview. "Unmatched" refers to students not geocoded due to address problems. There is one unmatched student attending Bayview. "Total Students Attending" shows the total number of students enrolled each school regardless of where they reside, and reflects the District's enrollment counts for each school. There are a total of 685 students attending Bayview Elementary School.

The next step is to read across the matrix, beginning with the Bayview attendance area row. We know that 521 represents the total number of students who reside in the Bayview Attendance area and attend Bayview. The next column, Castro, refers to the number of students who reside in the Bayview attendance area but attend Castro. There are currently 5 students residing in the Bayview attendance area but attend Castro Elementary School

The "Total # of Students Residing" column (left side) is the total number of students living in each particular attendance area. There are 813 students residing in the Bayview Attendance area. The "Total # of Students Residing" row is the actual number of students used in the Fall 2012/13 projections as the base number for each attendance area. Please review **Section Four** for the breakdown by grade of students residing in each attendance area.

Overview of the Elementary School Attendance Area Projections

Growth is projected to occur in the resident K-6 student population over the next 10 years. The growth will be driven primarily by the influx of larger kindergarten classes expected to enter the District over the next three years as the result of the implementation of Transitional kindergarten in fall 2012. This combined with the already present and growing student population bubble that has been forming at the K-6 level will cause the resident TK-6 student population to see significant gains over the next 10 years. 17,204 TK-6 students were reported to be living within the District in fall 2012. This number is expected to climb to reach a total of 18,652 by fall 2022. By the end of the projection period in fall 2022 the resident TK-6 student population is projected to be at 18,652 students an increase of 1,448 students from fall 2012. Much of this growth can be attributed to the impact transitional kindergarten is expected to have, improved mobility rates and the presence of planned residential development primarily in the Hercules area. Once transitional kindergarten is in full effect three additional months of births will be eligible to enroll within the District in a given year helping to add to what would already be a student population expected to grow.

23 of the District's 32 elementary attendance areas are expected to see an overall increase while the remaining 9 are projected to decline. Whether an attendance area is projected to grow or decline it is largely a function of one of two factors. First the size of the current kindergarten class and second the distribution of students amongst the grades served by the attendance area. Attendance areas that are currently housing larger kindergarten classes are expected to continue to grow as larger kindergarten classes are projected to be introduced throughout the district over the next two years as a result of the impact of transitional kindergarten is felt. Attendance areas that have both a larger kindergarten classes and an uneven student distribution heavily weighted towards the younger grades in the attendance area will see larger gains. As the smaller 5th and 6th grade classes graduate out and into middle school they will be replaced by larger kindergarten classes causing the student population to increase. Attendance areas that have resident student populations that are more evenly distributed will likely see minimal gains while attendance areas that have resident student populations that are concentrated towards the older classes will likely see declines over the span of the projection period. To what degree is a function of how much larger the older classes are than the younger ones that will replace them.

Of the 22 elementary attendance areas projected to see increases in their resident student populations over the next 10 years 7 are projected to see a major increase of over 100 students. Due to the presence of large kindergarten classes and the smaller sizes of the 6th grade classes, we should see gains in the resident K-6 student population of the Chavez, Coronado, Grant, Lincoln, Ohlone and Stege elementary attendance areas increase by at least 114 students and by as many as 203 students. Of the 9 elementary attendance areas expected to decline only Lake elementary is projected to a decline of any real significance, declining by 131 students by 2022. Unlike all of the other attendance areas Lake has the presence of kindergarten class that is much smaller than the other classes currently residing within its boundaries.

Overview of the Middle School Attendance Area Projections

As a whole the District's resident 7-8 student population should see increases in each of the next 3 years growing by a total of 636 students as the student population bubble that is current forming in grades K-5 enters the 7th grade in fall 2013. From this point forward a growing trend will take root as the population bubble makes its way through the 7th and 8th grades. Over the span of the next 10 years the resident 7-8 student population will grow to reach a projected total of 4,672 students by 2022.

The Helms Middle School attendance area is expected to see the largest increase over the next 10 years adding an additional 238 students to its resident student population by fall 2022. A smaller gain of 147 students is projected for the Portola Middle School attendance area, while the 7-8 resident student population at DeJean Middle is expected to increase by 150 students. Cresi Middle is expected to follow by adding 115 students by 2022 while Hercules Middle is only expected to add 19 students by this time. Declines are projected for each of the remaining middle school attendance areas. Stewart Elementary severing grades K-8 is also expected to the largest decline over the span of the projection period and is expected to decline by 37 students. The Pinloe Middle School attendance area should see a decrease of 15 resident 7-8 students.

Overview of the High School Attendance Area Projections

The bubble of large classes forming in the elementary grades is expected to begin impacting the District's High School student population by 2015 when the current 6th grade class enters the 9th grade. However until then the resident high school student population is expected to decline each year through 2014 to reach a low of 7,898 down by 78 students from fall 2012. Once the bubble begins to enter the high schools growth is expected to accelerate and occur annually through the remainder of the projection period to reach a total of 8,901 students by fall 2022 a total increase of 925 students from fall 2012.

Only 2 of the District's 6 attendance areas are projected to see declines over the next 10 years while the remaining 4 attendance areas will see gains. The largest gain is expected to occur within the El Cerrito High School attendance area as an estimated 5841 students is projected to be added to the resident student population by 2022. High mobility and larger incoming freshman classes will be the driving factors behind the growth. The same factors driving growth within the El Cerrito High School attendance area will also contribute to growing student populations in both the Kennedy and Richmond High School attendance areas as well with each area adding 202 and 227 9-12 grade students respectively. The addition of students as the result of planned development is expected to offset what would likely be a declining Hercules resident student population and cause it to stay stable over the next 10 years adding just 61 students over the scope of the 10 year projection period. The student distribution within the De Anza High School attendance area is much more evenly distributed as a result the student population is expected to only decline slightly over the next 10 years losing only 11 students during this time frame. The opposite is true for the Pinole Valley High School attendance area as the student population is weighted more towards the high school grades. As smaller freshmen classes replace the larger graduation senior classes nature decline will occur. In the end Pinole Valley High School should see a decline of 145 students by the start of the 2022 school year.
