Richmond, California

Fall 2011/2012 Report

Student Population Projections Fall 2012 – Fall 2021 By Residence

Based on Fall 2011 Data

Prepared by

April 9, 2012

TABLE OF CONTENTS

Introduction**Executive Summary**

Section One:	Methodology	
	Sources of Data	1
	Projection Methodology	3
	Applying Variables to Generate Projections	8
Section Two:	District Wide Student Projections	
	District Student Projection Summary	9
	Projection Summary Chart	11
Section Three:	Attendance Matrices	
	Attendance Matrix	12
	<i>Fall 2011/12 K-6 Elementary Attendance Matrix</i>	13
	<i>Fall 2011/12 7-8 Middle School Attendance Matrix</i>	14
	<i>Fall 2011/12 12 High School Attendance Matrix</i>	14
Section Four:	Attendance Area Projections	
	<i>Elementary School Attendance Area Map</i>	15
	Elementary School Projection Overview	16
	Elementary School Projections by Residence	17
	<i>Middle School Attendance Area Map</i>	26
	Middle School Projection Overview	27
	Middle School Projections by Residence	28
	<i>High School Attendance Area Map</i>	31
	High School Projection Overview	32
	High School Projections by Residence	33
Appendix A	District Wide Census Demographic Reports	
	U.S. Census Data within W.C.C.U.S.D. boundaries (Estimates by ESRI*)	36
Appendix B	Study Area Projections	
	Study Area Resident Projections	42

*The Third Party Demographic Reports are prepared using ESRI's Business Analyst Online (BAO). Reports are created by overlaying the West Contra Costa Unified School District boundary onto the ESRI BAO data. These reports are for informational purposes only; DDP is not responsible for the accuracy of the data.

INTRODUCTION

The West Contra Costa Unified School District has contracted with Davis Demographics & Planning, Inc. (DDP) to update and analyze demographic data relevant to the District's facility planning efforts. The scope of contracted work includes: mapping the District, address matching the current student file, developing and researching pertinent demographic data, identifying future residential development plans and developing a ten-year student population projection. DDP will then assist the District in developing solutions for housing future student population. Additionally, this was prepared to assist the District's efforts in evaluating future site requirements and attendance area changes.

The purpose of this report is to identify and inform the District of the trends occurring in the community; how these trends may affect future student population; and to assist in illustrating facility adjustments that may be necessary to accommodate the potential student population shifts. The District can then use this information to better plan for the need, location and timing of facility or boundary adjustments.

The **Sources of Data** section details where the two sources of data, geographic and non-geographic, are collected and how each data item is used in the student population projection model.

The **Projection Methodology** section discusses in detail how the factors used in the study were calculated and why they were used. These factors include: the calculation of incoming kindergarten classes, additional students from new housing (referred to as student yield), the effects of student mobility, and a detailed review of planned residential development within the District.

The **District Student Resident Projection Summary** section reviews the Fall 2010/11 student resident projection results. Included in these sections are a district wide student population projection summary and a projected resident student population summary for each existing attendance area and study area.

While reading this report, it is important to remember that this is a snapshot of current and potential student population based upon data gathered in Fall 2010/11. Population demographics change, development plans change, funding opportunities can change, District priorities can change, and therefore, new projections and adjustments to the overall Master Plan will continue to be necessary in the future.

EXECUTIVE SUMMARY

Davis Demographics & Planning, Inc. (DDP) is assisting the West Contra Costa Unified School District (District) to plan for future student population changes. As part of this effort, the District requested a 10 year forecast through fall 2021/21. This report contains the results of this student population study. Factors such as current and historical student data trends, birth trends and estimates, as well as planned residential development have been taken into consideration.

It is important to remember that this projection is based upon residence of the current and future students as opposed to actual enrollment at each campus and is designed to alert the District as to when and where student population shifts will occur. For a detailed accounting of the enrollment at each school along with insight into the current inter-district and intra-district transfer patterns, please review the attendance matrix (**Section Three – Attendance Matrices**).

An increase in the number of births reported between 2006 and 2008 is expected to cause larger kindergarten classes to be introduced to the District over the next 2 years. This will continue the trend that has been present in recent years and has helped to form a bubble of larger student classes that stretches from kindergarten to 5th grade. The District's K-6 resident student population is expected to grow in each of the first 2 years climbing by 408 students to a peak of 17,292 students in fall 2013. A smaller kindergarten class will be introduced as the result of a drop in births reported in 2009 and will cause a drop in the resident K-6 student population in fall 2014. Fluctuations will occur through the remainder of the projection but by the end of the projection period in fall 2021 the District should expect 17,082 resident K-6 students. 22 of the District's 32 elementary attendance areas are expected to see an overall increase while the remaining 10 are projected to decline. The Collins elementary attendance area is projected to see the largest gain of any attendance area as it is expected to gain an additional 109 K-6 students over the next 10. In contrast the Montalvin attendance area is projected to see the steepest decline of any of the elementary attendance areas and is expected to lose 119 students by 2021. Whether or not an elementary attendance area grows or declines will largely be determined by how the students residing within the attendance area are distributed among the grades. With birth rates playing such a pivotal role in the elementary student population projections it will be important for the District to continue to monitor these statistics as they become available in the future. This will be vital in determining if the drop in the births reported in 2009 and 2010 is an anomaly or the start of a new trend that could alter the later years of the projection.

As the forming student population bubble moves through the District it will begin to impact the District's resident 7th and 8th grade student population. Larger incoming 7th grade classes are expected to begin entering the District's middle school student population in fall 2012. This will result in a growing 7th and 8th grade student population through 2015. The trend is expected to return beginning in 2017 and last through 2020. At the end of the 10 year projection period in 2021 the resident 7-8 student population will have climbed by 326 students from fall 2011. The Helms Middle School attendance area is expected to see the largest increase over the next 10 years adding an additional 346 students to its resident student population by fall 2021. Over the same period The Hercules Middle School attendance area will see the largest decreases falling by 125 students.

Continued decline is forecasted for the resident high school student population through 2015. Once the student population bubble begins to entering the high schools a growing trend will begin to take hold. Overall the District should see an increase of 338 in its resident high school student population by 2021. Only 2 of the District's 6 high school attendance areas will account for the projected growth during this period while the remaining 4 attendance areas will see declines. Richmond High School is expected to add an additional 622 students over the next 10 years while an increase of 487 students is expected to occur within the El Cerritto attendance area during the same time period. The Pinole Valley attendance area is expected to see the steepest of the declines losing a projected 374 students over the next 10 years.

The District as a whole can expect to see an increase in its overall resident K-12 student population over the next 10 years. Growth is expected to occur in each year with the exception of 2014. By the end of the projection period in fall 2021 the district should see 29,764 resident students up 864 students from fall 2011. The continued impact of a forming student population bubble in the elementary grades will cause growth to occur across all grade groupings over the next ten years.

METHODOLOGY

1 - SOURCES OF DATA

A - Geographic Map Data

Five geographic data layers were updated for use in the ten-year student population projections:

1. Street Centerline Database
2. Study Areas
3. Schools
4. Students – Historical and Current
5. Future Residential Development

1) Street Centerline Data

DDP has licensed a digital street centerline map of the School District from SANGIS. The street database has associated attributes that contain, but are not limited to, the following fields: full street name, address range and street classification

The main function of the streets is in the geo-coding process of the student data. Each student is address matched to the streets by their given address. The geo-coding process places a point on the map for every student in the exact location of student residence. This enables DDP to analyze the student data in a geographic manner.

Another vital utilization of the digital street database is in the construction of study areas. Freeways, major streets and neighborhood streets are used as boundaries for the study areas.

2) Study Areas

Study areas are small geographic areas and the building blocks of a school district; they are similar to neighborhoods. Study areas are geographically defined following logical boundaries of the neighborhood, such as freeways, streets, railroad tracks, rivers, etc. Each study area is then coded with the elementary, middle and high school that the area is assigned to attend. By gathering information at the study area level, a school district can closely monitor growth and demographic trends in particular regions and spot potential need for boundary changes or new facilities.

3) Schools

The District provided school facility location information to DDP for the purpose of mapping the District facilities.

4) Student Data

a. Historical Student Data - Historical enrollment is used to compare past student population growth and trends as well as the effects of mobility (move-in, move-out from existing housing) throughout the District. DDP utilized the three (3) previous years' (2008/09, 2010/11 and 2011/12) address matched students as historical data.

b. Current Student Data - A student data file representing the enrollment approximately for October, 2011 was geocoded this geocoded student file was summarized by grade level and by study area is used as a base for enrollment

projections. Existing students were categorized by study area through the address matching process that locates each student within a particular area based upon their given address. The projections run each of the next ten years from fall 2011/12 through fall 2021/22.

The Student Accounting Summary (Table 1) indicates the total student enrollment as of October, 2010 and the number of student used in the ten year student population projections. The projection model is based upon student residence and excludes students residing outside of the District's boundaries, students unable to be address matched and special education students (special education students usually attend a school that services their particular need) and independent study students.

Student Accounting Summary
Fall 2011/12 Actual Enrollment (10/04/2011)

Total Students Provided by District File (Fall 11/12)	30,406
Students Living out of District	-165
Pre-K Students	-1,153
Students Unmatched	-59
Non Public Schools	-129
STUDENTS USED IN PROJECTIONS	28,900

Table 1 – Student Accounting Summary

5) Future Residential Development

Planned residential development data is collected to determine the number of new residential units that will be built over the ten-year timeframe of the student population projections.

B - Non-Geographic Data

Two basic sets of non-geographic data were compiled and reviewed for use in the ten-year student population projections by residence:

1. Births by Zip Code
2. Mobility Factors

1) Births by Zip Code Data - Birth data by postal zip code was obtained from the California State Department of Health for the years 1991-2010 and roughly correlated to the West Contra Costa Unified School District. Past changes in historical birthrates are used to estimate incoming kindergarten student population from existing housing.

2) Mobility Factors - Mobility refers to the increase/decrease in the migration of students within the District boundaries (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage of increase/decrease among each grade for every year of the projections

2 – PROJECTION METHODOLOGY

The projection methodology used in this study combines historical student population figures, past and present demographic characteristics, and planned residential development to forecast future student population at the study area level. District-wide projections are summarized from the individual study area projections. **These projections are based on where the students reside and their school of residence. DDP utilizes the actual location where students reside, as opposed to their school of enrollment, in order to provide the most accurate estimate of where future school facilities should be located.** The best way to plan for future student population shifts is to know where the next group of students will reside. The following details the methodology used in preparing the student population projections by residence.

Projections Timeframe

Projections are usually calculated out seven (7) to ten (10) years from the date of projection for several reasons. The planning horizon for any type of facility is typically around five years. Seven to ten years are sufficient to adequately plan for student population shift and facility reorganization. It is a short to mid term solution for planning needs. Projections beyond Ten Years are based on speculation due to the lack of reliable information on birthrates, new home construction, economic conditions, etc.

At the Districts request DDP completed a Ten Year Student Population Projection.

Why Projections are Calculated by Residence

Typically, school district projections are based on enrollment by school. However, this method is inadequate when used to locate future school facility requirements, because the location of the students is not taken into consideration. A school's enrollment can fluctuate due to variables in the curriculum, program changes, school administration and open enrollment policies. These variables can skew the apparent need for new or additional facilities in an area.

The method used by DDP is unique because it modifies a standard cohort projection with demographic factors and actual student location. **DDP bases it's projections on the belief that school facility planning is more accurate when facilities are located where the greatest number of students reside.**

The following details the methodology used in preparing the student population projections.

1) Progression - Each year of the projections, 12th grade students graduate, and continuing students progress through to the next grade level and kindergarten students start schools. This normal progression of students is modified by the following factors:

2) Incoming Kindergarten - Live birth data, reported to the California State Department of Health, by the resident postal zip code of the mother is used to project the base incoming kindergarten class. Additional kindergarten students may be added from future development. DDP uses birth data by zip code so, if need be, a different birth factor can be applied to various areas of the District.

Incoming kindergarten classes, for existing homes, are estimated by comparing changes in past births and birthrates. Table 2 shows the total births for each zip code in the West Contra Costa Unified School District from 1989 to 2010. Future kindergarten classes (2012/12-2021/22) are estimated by multiplying the existing kindergarten class (2011/12) by the ratio of the projected year's births to the 2006 births. Assuming that the Fall 2011/12 kindergarten class was born in 2006, DDP compared the total births in 2006 to the total births in 2007 to determine a factor for next year's kindergarten class (Fall 2012/13). Similarly, 2006 was compared to 2008 (Fall 2013/14 K class), 2006 to 2009 (Fall 2014/15 K class) and 2006 to 2010 (Fall 2015/16 K class).

DDP used birth data from the zip codes 94530, 94547, 94564, 94801, 94803, 94804, 94805 and 94806. There were 3,293 births in the baseline year of 2006. The data shows area births are higher in 2007 and 2008 than the 2006 base year data. This should lead to an increase in the kindergarten class size over the next 2 years. The number of births declined in 2009 and 2010 compared to the number of births observed in 2006, as a result we expect to see a smaller kindergarten class enter the district by year 3 and 4 of the projections.

Birth Year	El Cerrito	Hercules	Pinole	Richmond	El Sobrante	Richmond	Richmond	San Pablo	Ttl br/yr		
	94530	94547	94564	94801	94803	94804	94805	94806			
1989	259	294	225	709	343	756	192	1,002	3,780		
1990	267	308	261	699	385	820	177	1,065	3,982		
1991	253	295	244	711	373	735	201	1,039	3,851		
1992	232	283	259	667	346	663	182	985	3,617		
1993	230	262	214	629	352	629	168	1,006	3,490		
1994	246	289	219	570	338	617	158	926	3,363		
1995	216	238	194	519	282	614	177	893	3,133		
1996	217	233	212	564	286	590	148	877	3,127		
1997	231	228	205	530	277	583	177	862	3,093		
1998	230	223	215	571	288	609	152	943	3,231		
1999	218	230	191	571	283	641	196	890	3,220		
2000	243	198	221	591	285	639	153	970	3,300		
2001	220	232	203	664	317	658	161	979	3,434		
2002	237	225	175	685	144	704	195	934	3,299		
2003	263	225	193	553	278	627	178	964	3,281		
2004	283	210	210	575	252	658	181	962	3,331		
2005	259	283	185	564	238	596	164	960	3,249	Birthrates	Year of
2006	254	296	187	572	269	601	165	949	3,293	used by DDP	Projection
2007	297	299	170	595	260	633	160	1,005	3,419	103.8%	2012
2008	277	279	195	613	294	546	166	1,009	3,379	102.6%	2013
2009	289	286	202	540	244	599	145	847	3,152	95.7%	2014
2010	254	263	163	520	245	554	148	886	3,033	92.1%	2015
										98.6%	2016
										98.6%	2017
										98.6%	2018
										98.6%	2019
										98.6%	2020
										98.6%	2021

Table 2- Birth Data

3) Student Mobility Factors - Student mobility factors further refine the ten-year student population projections. Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage to each grade for every year of the projections.

A net increase or decrease of zero students over time is represented by a factor of 100% (1.0). A net student loss is represented by a factor less than 100% (1.00) and a net gain by a factor greater than 100% (1.00) (see example).

Example:

$$\begin{array}{r}
 100 \quad \text{8th grade students in fall 2011/12} \\
 \times \quad .913 \quad \text{(9th Grade mobility Crespi M.S. east area)} \\
 \hline
 = \quad \mathbf{91.3} \quad \mathbf{10th \text{ Grade students in Fall 2012/13}}
 \end{array}$$

Having historical student data categorized by study area is extremely helpful in calculating accurate Student Mobility Factors. DDP was able to utilize the last four years' (Fall 2008/09, 2009/10, 2010/11 and 2011/12) student data. The data was organized into four yearly groups and then changes in the individual grades were examined. For example, a comparison was made for the Fall 2008/09 K student population to the Fall 2009/10 1st grade students. This comparison was also conducted for the Fall 2009/10 to Fall 2010/11 and the Fall 2010/11 to Fall 2011/12 students.

Using historic student data by study area allows DDP to calculate and apply unique mobility factors to various portions of the district. The W.C.C.U.S.D. has various neighborhood compositions and density. DDP originally created mobility factors by middle school attendance area. Upon examination it was determined that the projections would be more accurate if those areas were broken down even further. Interstate 80 was used to split some of the middle school attendance area into east and west portions. Mobility was then applied by these areas.

	G1	G2	G3	G4	G5	G6	G7	G8	G9	G10	G11	G12
Crespi MS (East)	1.038	0.955	1.012	0.967	1.000	0.924	0.833	0.958	0.913	0.924	0.943	0.895

1.001 = positive migration 0.999 = negative migration

Table 3- Mobility Factors

4) Planned Residential Development –Planned residential development data is collected to determine the number of new residential units that will be built over the ten-year timeframe of the student population projections. The units projected to be built within the next ten years will have the appropriate Student Yield Factor, Table 4, applied to them to determine the number of new students planned residential development will yield.

This data was obtained through discussions with district staff, the major developers within the district boundaries, the local cities planning departments, the planning department of Contra Costa County and various other agencies. A database map of the planned residential development was created, including, when available, project name, location, housing type, total number of units and estimated move-in dates (phasing schedule). Projected phasing is based upon occupancy of the unit and is used to help time the arrival of students from these new developments.

In the student population projection by residence DDP includes all approved and tentative tract maps in addition to any planned or proposed development that possibly will occur within the projection timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the information may change and should be updated annually.

5) Student Yield Factors – Ten-Year Projections - Closely related to the planned residential development units are Student Yield Factors. The Student Yield Factors, when applied to planned residential development units, determine how many additional students will be generated from new construction within the District.

Student Yield Factors - District Wide*			
	K-6	7-8	9-12
<u>Type</u>	<u>Students</u>	<u>Students</u>	<u>Students</u>
SFD	0.210	0.056	0.147
SFA	0.047	0.015	0.014
MFA	0.333	0.154	0.185

SFD= Single Family Detached Units
 SFA= Single Family Attached Units
 MFA= Multifamily Attached Units

Table 4– Student Yield Factors

*Note: Student Yield Factors were calculated by Jack Schreder and Associates and given to DDP by the W.C.C.U.S.D staff

3 - APPLYING THE VARIABLES TO GENERATE THE PROJECTIONS

The following paragraphs summarize how DDP uses the factors to determine the student population projections. Remember that these projections are based on residence.

The West Contra Costa Unified School District has been broken up into 401 study areas and each study area is coded for the elementary, middle school and high school attendance area in which it fall. The residential projections are calculated at the study area level. This means that DDP conducts 401 individual projections that are based upon the number of students residing in each study area.

The first step in running these projections involves listing the number of students that live in a particular study area by each individual grade (kindergarten through 12th grade). The current student base (Fall 2010/11) is then passed to the next year's grade (2010/11's K become 2011/12's 1st graders, 2012/13's 1st graders become 2013/14's 2nd graders, and so on). After the natural progression of students through the grades is applied, then Birth Factors are multiplied by the current kindergarten class to generate a base for the following year's kindergarten class.

Next, a Mobility Factor is applied to all grades. Again, these factors take into account the natural in/out migration of students throughout the District.

The last essential layer applied to the projections deals with additional students from planned residential development. This is a simple calculation, again conducted at the study area level, where the estimated number of new housing units for a particular year is multiplied by the appropriate Student Yield Factors. For example, if 100 single family detached (SFD) units are to be built in a specific study area in a given year, then you would multiply this number (100) by the SFD K-6 student yield factor (.210) and the resulting number of students (21.0) is divided evenly among the seven grades.

To finish generating the projections by residence, the same process is conducted for each of the 401 study areas. Once the projections have been run at the study area level, then it is simple addition to determine projections for each of the District's attendance areas or for a district-wide summary. For example, the student population projections for Hercules High School are simply the summary of all of the study areas that make up this specific attendance area (see **Sections Four** for the projections of each school attendance area). The District Summary for the projections (**Section Two**) is a total summary of all 401 study areas, which excludes all of the students that attend a District school but live completely outside of the District's boundaries, special education students and independent study students. These out of district, special education students and independent study students are factored back into the projections by simply adding the existing totals in at the bottom of the projections. (Please see the Attendance Matrices in **Section Three** for a breakdown of the out-of-district, special education students and independent study students by school.) DDP adds the current total out-of-district and unmatched students, special education students and independent study students to each year of the projections because there is no way to accurately forecast the residence of these students in the future.

DISTRICT WIDE PROJECTION

TEN-YEAR PROJECTION SUMMARIES

Finally, the student population is projected out ten years for each of the study areas and for the entire West Contra Costa Unified School District. The District Wide projection summaries enable the District to see a broad overview of future student population and what impact this population will have on existing facilities. The study area listings enable the District to monitor student population growth or decline in smaller geographic areas within the District.

At any point in time, study areas and their projected resident students can be shifted between schools to assist in balancing enrollment changes. Together, these projection summaries present the means to identify the timing of student arrivals and overall facility requirements, as well as location in order to accommodate the District's expected population shift.

ATTENDANCE MATRIX

Three attendance matrices have been included to provide a better understanding of where students reside and where they attend school. **Remember, DDP projections are based upon where the students reside, not where they attend school. DDP uses the actual location where the students reside, as opposed to their school of enrollment, in order to provide the most accurate prediction of future facilities adjustments.** Therefore, since the projections are based upon where the students reside, the figures used as a base for each school's resident projection may differ from the actual reported enrollment for each school.

These attendance matrices act as a check and balance for student accounting. They show where the students reside (in what School of Residence) based upon our address matching capabilities and what school they attend (School of Attendance) based upon data in the student file supplied by the District. The inclusion of these matrices is essential to showing how the students used in the projections match up to the District's records of enrollment for each school. The best way to plan for future facilities changes is to know where the next group of students will be residing, not necessarily which school they are currently attending.

READING THE MATRIX

Looking at the K-6 Attendance Matrix on the following page, let's begin with Bayview as an example. Following down the first column with the Bayview heading, there are 485 students that attend Bayview and reside in the Bay view attendance area... Continuing downward, 0 students attend Bayview but reside in the Castro attendance area. Next the matrix shows that 0 student attend Bayview but resides in Chavez's attendance area, and so on.

The row "Out of District" refers to students who live completely outside of the West Contra Costa Unified School District, but attend one of the District's schools. There are no Out of District students attending Bayview. "Unmatched" refers to students not geocoded due to address problems. There is one unmatched student attending Bayview. "Total Students Attending" shows the total number of students enrolled each school regardless of where they reside, and reflects the District's enrollment counts for each school. There are a total of 588 students attending Bayview Elementary School.

The next step is to read across the matrix, beginning with the Bayview attendance area row. We know that 485 represents the total number of students who reside in the Bayview Attendance area and attend Bayview. The next column, Castro, refers to the number of students who reside in the Bayview attendance area but attend Castro. There are currently 7 students residing in the Bayview attendance area but attend Castro Elementary School

The "Total # of Students Residing" column (left side) is the total number of students living in each particular attendance area. There are 816 students residing in the Bayview Attendance area. The "Total # of Students Residing" row is the actual number of students used in the Fall 2010/11 projections as the base number for each attendance area. Please review **Section Four** for the breakdown by grade of students residing in each attendance area...

Overview of the Elementary School Attendance Area Projections

Growth is projected to occur in the resident K-6 student population over the next 10 years. The growth will be driven primarily by the influx of larger kindergarten classes expected to enter the District over the next three years as the result of the increasing number of births reported from 2006 – 2008. These students will continue to enter this District next year causing the resident K-6 student population to increase each year through 2013. 16,884 K-6 students were reported to be living within the District in fall 2011. This number is expected to climb to reach a peak total of 17,292 by fall 2013. The following year this number is expected to drop to 17,222 as a smaller kindergarten class is expected to be introduced to the existing student population as the result of a steep drop in the number of reported birth for 2009. Fluctuations are then expected to occur through the remainder of the projection period ranging from as many as 17,240 students in 2017 to as little as 17,014 students by 2020. By the end of the projection period in fall 2021 the resident K-6 student population is projected to be at 17,082 students an increase of 198 students from fall 2011.

22 of the District's 32 elementary attendance areas are expected to see an overall increase while the remaining 10 are projected to decline. Whether an attendance area is projected to grow or decline it is largely a function of one of two factors. First the size of the current kindergarten class and second the distribution of students amongst the grades served by the attendance area. Attendance areas that are currently housing larger kindergarten classes are expected to continue to grow as larger kindergarten classes are projected to be introduced throughout the district over the next two years as a result of the increase number of births that have been reported in the area over recent years. Attendance areas that have both a larger kindergarten classes and an uneven student distribution heavily weighted towards the younger grades in the attendance area will see larger gains. As the smaller 5th and 6th grade classes graduate out and into middle school they will be replaced by larger kindergarten classes causing the student population to increase. Attendance areas that have resident student populations that are more evenly distributed will likely see minimal gains while attendance areas that have resident student populations that are concentrated towards the older classes will likely see declines over the span of the projection period. To what degree is a function of how much larger the older classes are than the younger ones that will replace them.

Of the 22 elementary attendance areas projected to see increases in their resident student populations over the next 10 years only one is projected to see a major increase of over 100 students. Due to the large size of the last two kindergarten classes and the smaller sizes of the 6th grade class that resides within the Chavez elementary attendance area, we should see its resident K-6 student population increase by 109 students. Moderate gains between 70 and 95 students are expected over the next 10 years in the resident student populations of the Coronado, Highland, Lincoln, Riverside attendance areas. The remaining 17 elementary attendance areas expected to grow over the next 10 years are only projected to see increases of less than 47 students over the next 10 years. Moderate losses of between 44 and 71 students are projected for the Bay View, Grant, Lupine, Ohlone, Shannon and Sheldon attendance. 7 of the District's remaining elementary attendance areas are projected to see minor declines of no more than 37 students over the next 10 years. The Montalvin attendance area is set to see the steepest decline over the next 10 projected to lose 119 students due primarily to presence of a small kindergarten class for the fall 2011 2012 school year. Although larger incoming kindergarten classes are expected to follow over the next two years they are not expected to be able to replace the graduating 6th grade class causing the student population to enter a declining trend.

Overview of the Middle School Attendance Area Projections

As a whole the District's resident 7-8 student population should see increases in each of the next 3 years growing by a total of 287 students as the student population bubble that is current forming in grades K-5 enters the 7th grade in fall 2013. From this point forward a growing trend will take root with decreases expected between in 2015 and 2016 once more in 2021 as the population bubble makes its way through the 7th and 8th grades. Over the span of the next 10 years the resident 7-8 student population will reach a peak of 4,555 students by fall 2020. By the end of the projection period an increase of 326 students is expected to occur in the district resident 7-8 student population.

The Helms Middle School attendance area is expected to see the largest increase over the next 10 years adding an additional 346 students to its resident student population by fall 2021. A smaller gain of 168 students is projected for the Portola Middle School attendance area, while the 7-8 resident student population at DeJean Middle is expected to increase by only 29 students. Stewart Elementary severing grades K-8 is also expected to see an increase over the span of the projection period and is expected to grow by 26 students. Declines are projected for each of the remaining middle school attendance areas. The Hercules Middle School attendance area will see the largest of these decreases falling by 125 students. The Pinloe Middle School attendance area should see a decrease of 73 resident 7-8 students followed by the Crespi attendance area which is expected to lose 34 students over the next 10 years. Although there is a population bubble heading for the 7th and 8th grades its impact will be partially mitigated due to the negative mobility observed throughout the District. This factor causes classes to grow smaller as the move from one grade to the next lessening the impact the population bubble would otherwise have on the 7th and 8th grade projections.

Overview of the High School Attendance Area Projections

The bubble of large classes forming in the elementary grades is expected to begin impacting the District's High School student population by 2015 when the current 5th grade class enters the 9th grade. However until then the resident high school student population is expected to decline each year through 2014 to reach a low of 7,547 down by 507 students from fall 2011. Once the bubble begins to enter the high schools growth is expected to occur annually through the remainder of the projection period to reach a total of 8,396 students by fall 2021 a total increase of 342 students from fall 2011.

Surprisingly only 2 of the District's 6 attendance areas will account for the projected growth while the remaining 4 attendance areas will see declines. The largest decline will occur in the Pinole Valley attendance area which is expected to lose 374 students over the next 10 years. The Hercules attendance area is projected to lose 232 students over the next 10 years while the DeAnza and Kennedy attendance areas will decline by 140, and 27 students respectively. In each of these instances the declines can be attributed to the current student distribution amongst the grades. Smaller incoming 9th grade classes will replace larger graduating 12th grade classes. The situation will be the same in the El Cerrito attendance area through at least fall 2014. The mobility factors within the attendance area are not as low as they are in other areas of the District. This prevents the current student population bubble within the attendance area from begin depleted before it reaches the 9th grade. As these students arrive in fall 2014 the resident student population is expected to climb each year through the remainder of the projection period to reach a total of 1,713 students. This amounts to an increase of 487 students from fall 2011. Similar action is expected to occur within the Richmond attendance area only the growth is expected to being sooner and be larger. Growth will occur starting in 2013 and will continue until the resident student population grows to a total of 2,389 students by 2021 and increase of 622 students over 10 years.
