Grade Level/Course Title: Grade 8	Quarter 1	Academic Year: 2017-2018
-----------------------------------	-----------	--------------------------

### **Grade Level Mathematics Focus:**

In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.

### **Essential Questions for this Unit:**

1. How can students strategically choose and efficiently implement procedures to solve linear equations in one variable, understanding that when they use the properties of equality and the concept of logical equivalence, they maintain the solutions of the original equation?

Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
Aug - Sept Expressions and Equations	8.EE.7a	Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$ , $a = a$ , or $a = b$ results (where a and b are different numbers).	Understanding: • Syntax • Equivalence • Bar Models • Algebra Tiles • Decomposition • Zero Pairs • Variables	Analyze and Solve Linear Equations in one variable. Review: Adding Integers w/Decomposition, Subtracting Integers, Multiplying Integers, Dividing Integers (5 days) Review: Solving One-Step Equations using Decomposition, Bar Models, Inverse Operations, and Algebra Tiles; Solving one-step equations with fractional coefficients such as $\frac{1}{6}x = 10$ . (3 days)
(23 days)	8.EE.7b	Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms.		Review: Distributive Property & Combining Like Terms (2 days) Lesson 1.1: Solve Simple Equations (2 days) <u>Solve Equations – Multiple Methods</u> [L]
		**Please Note: This book does not teach the correct syntax for equations. Please refer to the following resource and require students to use the correct syntax: Syntax - Expressions, Equations, and Inequalities		Lesson 1.2 Solve Multi-step Equations (2 day) Lesson 1.3: Variables on Each Side (4 days) <u>Solving Equations with Variables on Both Sides</u> [L] <u>Clearing Fractions and Decimals from Equations</u> Lesson 1.4: Rewriting Equations for Formulas (3 days) Review and Assessment (2 days)

ade Level/Course Title: Grade 8	Quarter 4	Academic Year: 2017-2018
---------------------------------	-----------	--------------------------

#### Grade Level Mathematics Focus:

In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.

#### Essential Questions for this Unit:

How can students develop understanding of and use a linear equation to describe the association between two quantities in bivariate data (such as arm span vs. height for students in a classroom)? At this grade, fitting the model, and assessing its fit to the data are done informally. Interpreting the model in the context of the data requires students to express a relationship between the two quantities in question and to interpret components of the relationship (such as slope and *y*-intercept) in terms of the situation.

Unit (Time)	Standard	Standard Description	Content	Resources (Suggested # of Days)
Unit 8: (May-Jun)	8.SP.1	Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association.	Understanding: • Tables • Measures of Center	Patterns of Association in Bivariate Data Lesson 9.1: Scatter Plots (2 days) Interpreting Data in Graphs [L]
Probability and	8.SP.2	Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line.	<ul> <li>Interquartile Range</li> <li>Mean Absolute Deviation</li> </ul>	Lesson 9-2: Lines of Fit (1 day) Performance Task: <u>Animal Brains</u> [IMT] Lesson 9-3: Two-Way Tables (2 days) Performance Task: <u>Music and Sports</u> [IMT]
Statistics Bivariate Data,	8.SP.3	Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height.	Equivalence     Lesson 9.4: (     Number Line	Lesson 9.4: Choosing a Data Display (1day) Review and Assessment (2 days)
Descriptive Statistics (8 days)	8.SP.4	Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores?
