|--|------------------|---------------------------------|
| <b>Grade Level/Course Title: MS/HS Algebra I</b> | <b>Quarter 1</b> | <b>Academic Year: 2018-2019</b> |
|--|------------------|---------------------------------|

**Mathematics Focus for the Course:**

For the Model Algebra I course, instructional time should focus on four critical areas: (1) deepen and extend understanding of linear and exponential relationships; (2) contrast linear and exponential relationships with each other and engage in methods for analyzing, solving, and using quadratic functions; (3) extend the laws of exponents to square and cube roots; and (4) apply linear models to data that exhibit a linear trend.

**Essential Questions for this Unit:**

3. How can students build on their previous learning about how to solve linear equations in one variable and having applied algebraic methods to analyze and solve multi-step equations?
4. How can students develop fluency writing, interpreting, and translating among various forms of linear equations and inequalities, and use them to solve problems?
5. How can students master the solution of linear equations and apply related solution techniques to linear equations with no solutions, and infinitely many solutions?

| <b>Grade Level/Course Title: MS/HS Algebra I</b> | <b>Quarter 3</b> | <b>Academic Year: 2018-2019</b> |
|--|------------------|---------------------------------|

**Mathematics Focus for the Course:**

For the Model Algebra I course, instructional time should focus on four critical areas: (1) deepen and extend understanding of linear and exponential relationships; (2) contrast linear and exponential relationships with each other and engage in methods for analyzing, solving, and using quadratic functions; (3) extend the laws of exponents to square and cube roots; and (4) apply linear models to data that exhibit a linear trend.

**Essential Questions for this Unit:**

1. How can students extend the laws of exponents to rational exponents involving square and cube roots and apply this new understanding of number; and strengthen their ability to see structure in and create quadratic and exponential expressions.
2. How can students become facile with algebraic manipulation, including rearranging and collecting terms, and factoring, identifying, and canceling common factors in rational expressions?
3. How can students build on and extend their understanding of integer exponents to consider exponential functions, and compare and contrast linear and exponential functions, distinguishing between additive and multiplicative change?
4. How can students interpret geometric sequences as exponential functions?

|   | N-RN 2   | Rewrite expressions involving radicals and rational exponents using the properties of exponents.   |   |  |
|   | F-IF 7c  | Graph exponential and logarithmic functions, showing intercepts and end behavior.  |   |  |
|   | F-IF 8b  | Use the properties of exponents to interpret expressions for exponential functions.  |   |  |
|   | F-LE 2   | Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).        |   |  |
|   | F-LE 1c  | Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.   |   |  |
|   | F-BF 1a  | Determine an explicit expression, a recursive process, or steps for calculation from a context.  |   |  |
|   | F-BF 2   | Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.   |   |  |

| <b>Grade Level/Course Title: MS/HS Algebra I</b> | <b>Quarter 3</b> | <b>Academic Year: 2018-2019</b> |
|--|------------------|---------------------------------|

**Mathematics Focus for the Course:**

For the Model Algebra I course, instructional time should focus on four critical areas: (1) deepen and extend understanding of linear and exponential relationships; (2) contrast linear and exponential relationships with each other and engage in methods for analyzing, solving, and using quadratic functions; (3) extend the laws of exponents to square and cube roots; and (4) apply linear models to data that exhibit a linear trend.

**Essential Questions for this Unit:**

5. How can students extend the laws of exponents to rational exponents involving square and cube roots and apply this new understanding of number; and strengthen their ability to see structure in and create quadratic and exponential expressions.
6. How can students become facile with algebraic manipulation, including rearranging and collecting terms, and factoring, identifying, and canceling common factors in rational expressions?

**Mathematics Focus for the Course:**

For the Model Algebra I course, instructional time should focus on four critical areas: (1) deepen and extend understanding of linear and exponential relationships; (2) contrast linear and exponential relationships with each other and engage in methods for analyzing, solving, and using quadratic functions; (3) extend the laws of exponents to square and cube roots; and (4) apply linear models to data that exhibit a linear trend.

**Essential Questions for this Unit:**

1. How can students create and solve equations, inequalities, and systems of equations involving quadratic expressions?
2. How can students consider quadratic functions, comparing the key characteristics of quadratic functions to those of linear and exponential functions, and select from among these functions to model phenomena?
3. How can students learn to anticipate the graph of a quadratic function by interpreting various forms of quadratic expressions, and in particular, identify the real solutions of a quadratic equation as the zeros of a related quadratic function?
