Task Model 1

Response Type:
Graphing

DOK Level 2

F-IF.C.7
Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.

d. Graph linear and quadratic functions and show intercepts, maxima, and minima.

e. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.

f. Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior.

f. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.

Evidence Required:

2. Students graph functions expressed symbolically and show key features of the graph.

Tools: None

Accessibility Note:
Graphing items are not currently able to be Brailled. Minimize the number of items developed to this TM.

- Place a point on the coordinate grid to show the y-intercept of the function.

Interaction: The student will graph lines using the Add Arrow tool and/or plot points using the Add Point tool.

Rubric: (2 points) The student graphs the correct line and plots the point at the correct location that represents a key feature [e.g., Example Stem 1, draws a correct line and plots the x-intercept located at (-3, 0)].
(1 point) The student graphs the correct line or plots the point at the correct location that represents a key feature [e.g., Example Stem 1, draws a correct line OR plots the x-intercept located at (-3, 0)].

Response Type: Graphing

Task Model 4

Response Type:
Matching Table

DOK Level 2

F-IF.C.9

Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.*

Evidence Required:

4. Students compare properties of two functions represented in different ways (e.g., as equations, tables, graphs, or written descriptions).

Tools: Calculator

Example Stem: The graph represents $f(x)$ and the table shows some values of another quadratic function $g(x)$.

x	-4	-3	-2	-1	0	1	2	3	4	5	6
g(x)	0	-9	-16	-21	-24	-25	-24	-21	-16	-9	0

Select whether each statement is True or False about the given functions.

Statement	True	False
The minimum value of $f(x)$ is greater than the minimum value of $g(x)$.		
The value of x when $f(x)$ is at its minimum is less than the value of x when $g(x)$ is at its minimum.		

Rubric:

(1 point) The student correctly identifies each statement as True or False (e.g., TT).

Response Type: Matching Table

<p>Task Model 4</p> <p>Response Type: Hot Spot</p> <p>DOK Level 2</p> <p>F-IF.C.9 Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). <i>For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.</i></p> <p>Evidence Required: 4. DOK Level 2

F-IF.C.9
Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). *For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.*

Evidence Required:
4. Students compare properties of two functions represented in different ways (e.g., as equations, tables, graphs, or written descriptions).

Tools: None

Prompt Features: Students will identify the relationships, common properties, or key features shared between two functions represented in different ways.

Stimulus Guidelines: (same as TM4a)

TM4c
Stimulus: The student is presented with the graph of a quadratic function and a table of equations that may or may not represent the function.

Example Stem: Determine whether each equation in the table represents the graph of the function shown. Select Yes or No for each equation.

Function	Yes	No
$f(x) = (x - 3)(x - 9)$		
$f(x) = (x + 3)(x - 9)$		
$f(x) = (x + 6)(x - 9)$		
$f(x) = (x - 3)^2 - 18$		
$f(x) = (x - 6)^2 - 9$		

Rubric:
(1 point) Student correctly selects the functions that could be represented by the given graph (e.g., YNNNY).

Response Type: Matching Table
