

Multiple Representations of Equations **& What We Know**

California State Standards: 7 AF 1.1, 7 AF 3.3, 7 AF 3.4, Alg. 6.0, Alg. 7.0, Alg. 18.0

CCSS: 8.EE.6, 8.F.1, 8.F.2, 8.F.4

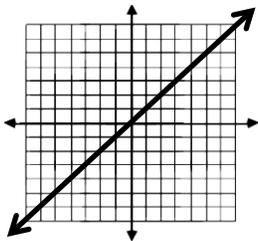

The idea of this lesson is to have students make connections between the multiple ways that an equation can be represented and what we know about these equations. This lesson will cover linear functions with positive and negative slopes and various vertical phase shifts. After filling out a chart with the students, we will have the students fill in their own charts beginning with a variety of different information. This process will be repeated so that students will have a chance to make connections between verbal descriptions, equations, tables of values, graphs and the information we know.

Note that the worked out “our turn” and “your turn” charts can also be used as a matching activity.

Also note that there are various ways students may fill out the verbal description column and convert from one form of an equation to another.

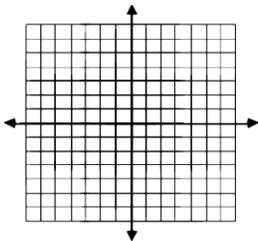

Our Turn! (worked out)

Given Verbal Description

<u>Verbal Description</u>	<u>Equation</u>	<u>Table of Values</u>	<u>Graph</u>	<u>Things We Know</u>																								
A number y is a number x .	<p><u>Slope-Intercept Form</u> $y = x$</p> <p>$y - y = x - y$ $0 = x - y$</p> <p><u>Standard Form</u> $x - y = 0$</p>	<table border="1"> <thead> <tr> <th>Input (x)</th> <th>Equation $y = x$</th> <th>Output (y)</th> <th>(Input, Output) (x, y)</th> </tr> </thead> <tbody> <tr> <td>-2</td> <td>$y = -2$</td> <td>-2</td> <td>(-2, -2)</td> </tr> <tr> <td>-1</td> <td>$y = -1$</td> <td>-1</td> <td>(-1, -1)</td> </tr> <tr> <td>0</td> <td>$y = 0$</td> <td>0</td> <td>(0,0)</td> </tr> <tr> <td>1</td> <td>$y = 1$</td> <td>1</td> <td>(1,1)</td> </tr> <tr> <td>2</td> <td>$y = 2$</td> <td>2</td> <td>(2,2)</td> </tr> </tbody> </table>	Input (x)	Equation $y = x$	Output (y)	(Input, Output) (x, y)	-2	$y = -2$	-2	(-2, -2)	-1	$y = -1$	-1	(-1, -1)	0	$y = 0$	0	(0,0)	1	$y = 1$	1	(1,1)	2	$y = 2$	2	(2,2)		<p><u>Linear Equation</u></p> <p>x-intercept: <u>(0,0)</u></p> <p>y-intercept: <u>(0,0)</u></p> <p>positive slope</p> <p>rate of change = $\frac{1}{1}$</p> <p><u>It is a Function</u></p>
