

West Contra Costa Unified School District  
**Grade 8 Mathematics Curriculum Guide**

Grade Level/Course Title: Grade 8		Quarter 1	Academic Year: 2015-2016	
<b>Grade Level Mathematics Focus:</b> In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.				
<b>Essential Questions for this Unit:</b> 1. What are the types of numbers in the real number system and where are they located on a number line? 2. What is the mathematical definition of an irrational number and how can you approximate them by using rational numbers?				
Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
<b>Unit 1:</b> <b>(Aug – Sept)</b>  <b>The Number System</b>  <b>Real Numbers</b>  <b>(15 days)</b>	8.NS.1	Know that numbers that are not rational are called irrational. Understand informally that every number has a decimal expansion; for rational numbers show that the decimal expansion repeats eventually, and convert a decimal expansion, which repeats eventually into a rational number.	Understanding: <ul style="list-style-type: none"> <li>• Syntax</li> <li>• Equivalency</li> <li>• Number Line</li> </ul>	<b><u>Rational and Irrational Numbers</u></b>  <i>First review: Multiplication Facts, Division Facts, Prime Factorization, Simplifying Fractions using Decomposition, Classifying Numbers (5 days)</i>  Lesson 1-1: Rational Numbers, Examples 1-4 <ul style="list-style-type: none"> <li>• Writing Fractions as Decimals (1 day)</li> <li>• Writing Decimals as Fractions (1 day)</li> </ul> <i>First Review: Adding Integers w/Decomposition, Subtracting Integers, Multiplying Integers, Dividing Integers (4 days)</i>  <b><u>Expressions and Equations</u></b>  Lesson 1-2: Powers and Exponents <ul style="list-style-type: none"> <li>• Write Expressions using Exponents (1 day)</li> <li>• Evaluate Expressions with Exponents (1 day)</li> </ul> Assessment and Review (2 days)

## Grade 8 Mathematics Curriculum Guide

Grade Level/Course Title: Grade 8		Quarter 1	Academic Year: 2015-2016	
<p><b>Grade Level Mathematics Focus:</b> In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.</p>				
<p><b>Essential Questions for this Unit:</b> 1. How can students strategically choose and efficiently implement procedures to solve linear equations in one variable, understanding that when they use the properties of equality and the concept of logical equivalence, they maintain the solutions of the original equation?</p>				
Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
<b>Unit 2:</b> <b>(Sept)</b>  <b>Expressions and Equations</b>  <b>(17 days)</b>	8.EE.7	<p><b>Solve linear equations in one variable.</b></p> <p>a. Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form <math>x = a</math>, <math>a = a</math>, or <math>a = b</math> results (where <math>a</math> and <math>b</math> are different numbers).</p> <p>b. Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms.</p>	<p>Understanding:</p> <ul style="list-style-type: none"> <li>• Syntax</li> <li>• Equivalence</li> <li>• Bar Models</li> <li>• Algebra Tiles</li> <li>• Decomposition</li> <li>• Zero Pairs</li> <li>• Variables</li> </ul>	<p><b>Analyze and Solve Linear Equations</b></p> <p><i>First review: Solving One-Step Equations using Decomposition, Bar Models, Inverse Operations, and Algebra Tiles; Solving one-step equations with fractional coefficients such as <math>\frac{1}{6}x = 10</math>. (2 days)</i></p> <p>Lesson 2-2: Solve Two-Step Equations (2 days)  <a href="#">Solve Equations – Multiple Methods</a> [L]            Lesson 2-3 Write Two-Step Equations (1 day)</p> <p><i>Review: Distributive Property &amp; Combining Like Terms (1 day)</i></p> <p>Lesson 2-4: Variables on Each Side (2 days)  <a href="#">Solve Equations – Variables on Both Sides</a> [L]            Lesson 2-5: Solve Multi-Step Equations (3 days)</p> <p>Lesson 3-8: Solve Systems of Equations Algebraically (1 day)</p> <ul style="list-style-type: none"> <li>• Elimination (2 days)</li> </ul> <p>Lesson 1-1: Rational Numbers, Example 5 (1 day)</p> <ul style="list-style-type: none"> <li>• Repeating Decimals as Fractions</li> </ul> <p>Assessment and Review (2 days)</p>
	8.EE.8	<p><b>Analyze and Solve pairs of simultaneous linear equations.</b></p> <p>b. Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection. <i>For example, <math>3x + 2y = 5</math> and <math>3x + 2y = 6</math> have no solution because <math>3x + 2y</math> cannot simultaneously be 5 and 6.</i></p> <p>c. Solve real-world and mathematical problems leading to two linear equations in two variables.</p>		

West Contra Costa Unified School District  
**Grade 8 Mathematics Curriculum Guide**

Grade Level/Course Title: <b>Grade 8</b>		Quarter 1	Academic Year: 2015-2016	
<p><b>Grade Level Mathematics Focus:</b>            In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.</p>				
<p><b>Essential Questions for this Unit:</b></p> <ol style="list-style-type: none"> <li>How can students develop understanding of and use linear equations, systems of linear equations, linear functions, and the slope of a line to analyze situations and solve problems?</li> <li>How can students demonstrate their understanding that slope is the graphic representation of a rate of change, and specifically equations for proportions (<math>y/x = m</math> or <math>y = mx + b</math>) are special linear equations where the constant of proportionality is the slope, and the line is graphed through the origin?</li> <li>How can students solve systems of two linear equations in two variables and relate the systems to pairs of lines in the plane; these intersect, are parallel, or are the same line?</li> <li>How can students solve systems of two linear equations in two variables and relate the systems to pairs of lines in the plane; these intersect, are parallel, or are the same line?</li> </ol>				
Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
<b>Unit 3:</b> <b>(Oct)</b>  <b>Linear Equations in One and Two Variables</b>  <b>(16 days)</b>	8.EE.5	Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways. For example, compare a distance-time graph to a distance-time equation to determine which of two moving objects has greater speed.	Understanding: <ul style="list-style-type: none"> <li>Coordinate Plane</li> <li>Ordered Pairs</li> <li>Slope</li> <li>Rate of Change</li> </ul>	<p><b><u>Proportional Relationships, Lines, &amp; Linear Equations</u></b></p> <p><i>First review: Coordinate Grid, Origin, X/Y Axes, Plotting Points 1<sup>st</sup>-4<sup>th</sup> Quadrants, Creating Expanded Tables, Graphing Linear Functions from a Table, Graphing Horizontal &amp; Vertical Lines (3 days)</i></p> <p>Lesson 3-1: Constant Rate of Change (1 day)            Lesson 3-2: Slope (2 days)            Lesson 3-3: Equations in <math>y = mx</math> Form (1 day)            Lesson 3-4: Slope-Intercept Form (2 days)           <ul style="list-style-type: none"> <li>Graphing Using Slope-Intercept Form (1 day)</li> </ul>           Inquiry Lab: Slope Triangles (1 day)           <ul style="list-style-type: none"> <li>Graphing Using X &amp; Y Intercepts (1 day)</li> </ul>           Lesson 3-7: Solve Systems of Equations by Graphing (2 days)  <a href="#">Solving Systems of Equations</a> [CP]</p> <p>Assessment and Review (2 days)</p>
	8.EE.8a	Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously.		

## Grade 8 Mathematics Curriculum Guide

Grade Level/Course Title: Grade 8		Quarter 2	Academic Year: 2015-2016	
<p><b>Grade Level Mathematics Focus:</b> In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.</p>				
<p><b>Essential Questions for this Unit:</b></p> <ol style="list-style-type: none"> <li>How can students grasp the concept of a function as a rule that assigns to each input exactly one output?</li> <li>How can students understand that functions describe situations where one quantity determines another?</li> <li>How can students understand and learn to translate among representations and partial representations of functions (noting that tabular and graphical representations may be partial representations), and describe how aspects of the function are reflected in the different representations?</li> </ol>				
Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
<b>Unit 4:</b> <b>(Nov)</b>  <b>Functions</b>  <b>Linear,</b> <b>Non-Linear,</b> <b>and</b> <b>Quadratic</b>  <b>(20 days)</b>	8.F.1	Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output.	Understanding: <ul style="list-style-type: none"> <li>• Multiple Representations</li> <li>• Tables</li> <li>• Graphs</li> <li>• Constraints</li> <li>• Input</li> <li>• Output</li> <li>• Change</li> <li>• Function Notation</li> </ul>	<p><b><u>Define, Evaluate, and Compare Functions</u></b></p> Lesson 4-1: Represent Relationships (2 days) <ul style="list-style-type: none"> <li>• <a href="#">Interpreting Data in Graphs</a> [L]</li> </ul> Lesson 4-2: Relations (1 day) Inquiry Lab: Relations and Functions (1 day) Lesson 4-3: Functions (2 days) Lesson 4-4: Linear Functions (2 days)  Mid-Chapter Check (1 day)  Lesson 4.5 Compare Properties of Functions (1 day)
	8.F.2	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). <i>For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change.</i>		
	8.F.3	Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear. <i>For example, the function <math>A = s^2</math> giving the area of a square as a function of its side length is not linear because its graph contains the points (1, 1), (2, 4) and (3, 9), which are not on a straight line.</i>		

## Grade 8 Mathematics Curriculum Guide

Grade Level/Course Title: Grade 8		Quarter 2	Academic Year: 2015-2016	
<p><b>Grade Level Mathematics Focus:</b> In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.</p>

Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
<b>Unit 4:</b> <b>(Nov – Dec)</b> <b>(continued)</b>  <b>Functions</b>  <b>Linear,</b> <b>Non-Linear,</b> <b>and</b> <b>Quadratic</b>	8.F.4	Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two $(x, y)$ values, including reading these from a table or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.	Understanding: <ul style="list-style-type: none"> <li>Multiple Representations</li> <li>Tables</li> <li>Graphs</li> <li>Constraints</li> <li>Input</li> <li>Output</li> <li>Change</li> <li>Function Notation</li> </ul>	<p><b><u>Use Functions to Model Relationships Between Quantities.</u></b></p> Lesson 4.6: Construct Functions (2 days) <ul style="list-style-type: none"> <li><a href="#">Interpreting Graphs - Real Life Functions</a> [L]</li> </ul> Lesson 4-7: Linear and Nonlinear Functions (2 days) <ul style="list-style-type: none"> <li><a href="#">Family of Functions</a> [CP]</li> </ul> Lesson 4-8 Quadratic Functions (2 days) <ul style="list-style-type: none"> <li><a href="#">Quadratics - Matching Game</a> [L]</li> </ul> Lesson 4.9 Qualitative Graphs (2 days)
	8.F.5	Describe qualitatively the functional relationship between two quantities by analyzing a graph (e.g., where the function is increasing or decreasing, linear or nonlinear). Sketch a graph that exhibits the qualitative features of a function that has been described verbally.		

## Grade 8 Mathematics Curriculum Guide

Grade Level/Course Title: Grade 8		Quarter 2	Academic Year: 2015-2016	
<p><b>Grade Level Mathematics Focus:</b> In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.</p>				
<p><b>Essential Questions for this Unit:</b></p> <ol style="list-style-type: none"> <li>1. What are the types of numbers in the real number system and where are they located on a number line?</li> <li>2. What is the mathematical definition of an irrational number and how can you approximate them by using rational numbers?</li> </ol>				
Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
<b>Unit 5:</b> <b>(Jan)</b>  <b>Real Numbers, Exponents, and Roots</b>  <b>(19 days)</b>	8.EE.1	Know and apply the properties of integer exponents to generate equivalent numerical expressions. For example, $3^2 \times 3^{-5} = 3^{-3} = 1/3^3 = 1/27$ .	Understanding: <ul style="list-style-type: none"> <li>• Syntax</li> <li>• Equivalency</li> <li>• Number Line</li> <li>• Exponent Properties</li> <li>• Powers of Ten</li> <li>• Estimation</li> <li>• Inequality</li> </ul>	<p><b>Radicals and Integer Exponents</b></p> <p><i>First review: Simplifying Powers of Monomials w/ Decomposition, Dividing Monomials using Decomposition (2 days)</i></p> <p>Lesson 1.3 Multiply and Divide Monomials (2 days) Lesson 1.4 Powers of Monomials (2 days)</p> <p><i>First review: Using patterns to explain zero and negative exponents (1 day)</i></p> <p>Lesson 1.5 Negative Exponents (1 day) Lesson 1.6 Scientific Notation (1 day) Compute with Scientific Notation (1 day)</p>
	8.EE.3	Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other. <i>For example, estimate the population of the United States as 3 times <math>10^8</math> and the population of the world as 7 times <math>10^9</math>, and determine that the world population is more than 20 times larger.</i>		
	8.EE.4	Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other. <i>For example, estimate the population of the United States as 3 times <math>10^8</math> and the population of the world as 7 times <math>10^9</math>, and determine that the world population is more than 20 times larger.</i>		

## Grade 8 Mathematics Curriculum Guide

Grade Level/Course Title: Grade 8		Quarter 2/3	Academic Year: 2015-2016	
<p><b>Grade Level Mathematics Focus:</b> In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.</p>				
<p><b>Essential Questions for this Unit:</b></p> <ol style="list-style-type: none"> <li>1. What are the types of numbers in the real number system and where are they located on a number line?</li> <li>2. What is the mathematical definition of an irrational number and how can you approximate them by using rational numbers?</li> </ol>				
Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
<b>Unit 5:</b> <b>(Jan)</b> <b>(continued)</b> <b>Real</b> <b>Numbers,</b> <b>Exponents,</b> <b>and Roots</b>	8.EE.2	Use square root and cube root symbols to represent solutions to equations of the form $x^2 = p$ and $x^3 = p$ , where $p$ is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes. Know that $\sqrt{2}$ is irrational.	Understanding: <ul style="list-style-type: none"> <li>• Syntax</li> <li>• Equivalency</li> <li>• Number Line</li> <li>• Exponent Properties</li> <li>• Powers of Ten</li> <li>• Estimation</li> </ul> Inequality	<p><b><u>Radicals and Integer Exponents</u></b></p> <p><i>First review: Finding Simple Square Roots, Finding Square Roots and Cubed Roots Using Decomposition (1 day)</i></p> <p>Lesson 1.8 Roots (2 days)  <a href="#">Quotient of Powers</a> [L]  <a href="#">Square &amp; Square Roots</a> [L]</p> <p>Lesson 1.9 Estimate Roots (2 days)            Lesson 1.10 Compare Real Numbers (2 days)  <a href="#">Real Number Line Development &amp; Venn Diagram</a> [CP]            Assessment and Review (2 days)</p>
	8.NS.2	Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions (e.g., $\pi^2$ ). <i>For example, by truncating the decimal expansion of <math>\sqrt{2}</math>, show that <math>\sqrt{2}</math> is between 1 and 2, then between 1.4 and 1.5, and explain how to continue on to get better approximations.</i>		

West Contra Costa Unified School District  
**Grade 8 Mathematics Curriculum Guide**

Grade Level/Course Title: <b>Grade 8</b>		Quarter 3	Academic Year: 2015-2016	
<b>Grade Level Mathematics Focus:</b> In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.				
<b>Essential Questions for this Unit:</b> 1. How can students show that the sum of the angles in a triangle is the angle formed by a straight line, and that various configurations of lines give rise to similar triangles because of the angles created when a transversal cuts parallel lines? 2. How can students understand the statement of the Pythagorean Theorem and its converse, and explain why the Pythagorean Theorem holds, for example, by decomposing a square in two different ways? 3. How can students apply the Pythagorean Theorem to find distances between points on the coordinate plane, find lengths, and analyze polygons?				
Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
<b>Unit 6:</b> <b>(Feb-Mar)</b>  <b>Geometry</b> <b>Part I</b>  <b>(19 days)</b>	8.G.5	Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles. <i>For example, arrange three copies of the same triangle so that the sum of the three angles appears to form a line, and give an argument in terms of transversals why this is so.</i>	Understanding: • Congruence • Pythagorean Theorem • Triangles • Distance on a Coordinate Plane • Polygons • Parallel Lines • Angles	<b><u>Congruence and Similarity Using Physical Models</u></b>  Lesson 5-1: Lines (2 days) Lesson 5-2: Geometric Proof (1 day) Inquiry Lab: Triangles (2 days) • <a href="#">Classifying Triangles</a> [CP] Lesson 5-3: Angles of Triangles (1 day) Inquiry Lab: Algebra Tiles (1 day) Lesson 5-4: Polygons and Angles (2 days) Mid-Chapter Check (1 day)  <b><u>Understand and Apply the Pythagorean Theorem</u></b>  Lesson 5-5: The Pythagorean Theorem (2 days) • <a href="#">Pythagorean Theorem Activity</a> [L] Inquiry Lab: Proofs About the Pythagorean Theorem (1 day) • <a href="#">Pythagorean Theorem and Its Converse</a> [L] Lesson 5-6: Use the Pythagorean Theorem (2 days) • <a href="#">Pythagorean Theorem Worksheet</a> [GMR] Lesson 5-7: Distance on the Coordinate Plane (2 days)  Assessment and Review (2 days)
	8.G.6	Explain a proof of the Pythagorean Theorem and its converse.		
	8.G.7	Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions.		
	8.G.8	Apply the Pythagorean Theorem to find the distance between two points in a coordinate system.		

## Grade 8 Mathematics Curriculum Guide

Grade Level/Course Title: Grade 8		Quarter 3	Academic Year: 2015-2016	
<p><b>Grade Level Mathematics Focus:</b> In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.</p>				
<p><b>Essential Questions for this Unit:</b> 1. How can students use ideas about distance and angles, how they behave under translations, rotations, reflections, and dilations, and ideas about congruence and similarity to describe and analyze two-dimensional figures and to solve problems?</p>				
Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
<b>Unit 6:</b> <b>(Mar)</b>  <b>Geometry</b> <b>Part II</b>  <b>(28 days)</b>	8.G.1	Verify experimentally the properties of rotations, reflections, and translations:	Understanding: <ul style="list-style-type: none"> <li>• Transformation</li> <li>• Congruence</li> <li>• Similarity</li> <li>• Slope and Similar Triangles</li> <li>• Area</li> <li>• Translations</li> <li>• Rotations</li> <li>• Reflections</li> <li>• Line of Reflection</li> <li>• Dilation</li> </ul>	<p><b><u>Congruence and Similarity Using Physical Models</u></b></p> Introduction to Chapter and Unit Project (2 days) Lesson 6-1: Translations (1 day) <ul style="list-style-type: none"> <li>• <a href="#">National Library of Virtual Manipulatives: Turtle Geometry</a></li> </ul> Inquiry Lab: Investigate Congruent Triangles (1 day) Lesson 6-2: Reflections (use mirrors) (1 day) Mid-Chapter Check (1 day) Lesson 6-3: Rotations (1 day) Inquiry Lab: Rotational Symmetry (1 day) Lesson 6-4: Dilations (1 day) Assessment and Review (2 days)
	8.G.1a	Lines are taken to lines, and line segments to line segments of the same length.		
	8.G.1b	Angles are taken to angles of the same measure.		
	8.G.1c	Parallel lines are taken to parallel lines.		
	8.G.2	Understand that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them.		
	8.G.3	Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.		
8.G.4	Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them.

Grade Level/Course Title: Grade 8		Quarter 4	Academic Year: 2015-2016	
<p><b>Grade Level Mathematics Focus:</b>                      In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.</p>				
<p><b>Essential Questions for this Unit:</b>                      1. How can students complete their understanding and work on volume by solving problems involving cones, cylinders, and spheres?</p>				
Unit (Time)	Standard	Standard Description	Content	Resources (Suggested Number of Days)
Unit 7: (Apr– May)  Volume  (15 days)	8.G.9	Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.	Understanding: • Volume of Cylinders, Cones, and Spheres	<p><b><u>Volume of Cylinders, Cones, and Spheres.</u></b></p> <p><i>Review Area, Perimeter, Especially Circles (2 days)</i></p> <p><a href="#">Circle Vocabulary</a> [CP]  <a href="#">Area of a Circle</a> [CP]</p> <p>Lesson 8-1: Volume of Cylinders (2 days)</p> <ul style="list-style-type: none"> <li>• <a href="#">Volume of Prisms, Cylinders, and Cones</a> [CP]</li> </ul> <p>Lesson 8-2: Volume of Cones (2 days)                      Lesson 8-3: Volume of Spheres (1 day)                      Mid-Chapter Check and Assessment (1 day)                      Lesson 8-4: Surface Area of Cylinders (2 days)</p> <ul style="list-style-type: none"> <li>• <a href="#">Surface Area of Prisms, Cylinders, and Cones</a> [CP]</li> </ul> <p>Lesson 8-5: Surface Area of Cones (2 days)                      Lesson 8-6: Changes in Dimension (1 day)</p> <p>Assessment and Review (2 days)</p>
	8.EE.2	Use square root and cube root symbols to represent solutions to equations of the form $x^2 = p$ and $x^3 = p$ , where $p$ is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes. Know that $\sqrt{2}$ is irrational.		

West Contra Costa Unified School District  
**Grade 8 Mathematics Curriculum Guide**

<b>Grade Level/Course Title: Grade 8</b>	<b>Quarter 4</b>	<b>Academic Year: 2015-2016</b>
--	------------------	---------------------------------

**Grade Level Mathematics Focus:**

In Grade 8, instructional time should focus on three critical areas: (1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; (2) grasping the concept of a function and using functions to describe quantitative relationships; (3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.

**Essential Questions for this Unit:**

- How can students develop understanding of and use a linear equation to describe the association between two quantities in bivariate data (such as arm span vs. height for students in a classroom)? At this grade, fitting the model, and assessing its fit to the data are done informally. Interpreting the model in the context of the data requires students to express a relationship between the two quantities in question and to interpret components of the relationship (such as slope and y-intercept) in terms of the situation.

Unit (Time)	Standard	Standard Description	Content	Resources (Suggested # of Days)
<b>Unit 8:</b> <b>(May-Jun)</b>  <b>Probability and Statistics</b>  <b>Bivariate Data, Descriptive Statistics</b>  <b>(8 days)</b>	8.SP.1	Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association.	Understanding: <ul style="list-style-type: none"> <li>• Tables</li> <li>• Measures of Center</li> <li>• Interquartile Range</li> <li>• Mean Absolute Deviation</li> <li>• Equivalence</li> <li>• Number Line</li> <li>• Bar Graphs</li> <li>• Box-n-Whisker</li> <li>• Clusters</li> </ul>	<b><u>Patterns of Association in Bivariate Data</u></b>  Chapter 9: Inquiry Lab (1 day) Lesson 9-1: Scatter Plots (1 day) Inquiry Lab: Scatter Plots (1 day) Lesson 9-2: Lines of Best Fit (1 day) Inquiry Lab: Graphing Technology: <ul style="list-style-type: none"> <li>• Linear and Nonlinear Association (1 day)</li> </ul> Lesson 9-3: Two-Way Tables (2 days)  Mid-Chapter Check (1 day)
	8.SP.2	Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line.		
	8.SP.3	Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. <i>For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height.</i>		
	8.SP.4	Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. <i>For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores?</i>
